1.0 PURPOSE

This report documents the process used to identify source area target analytes in support of the 100-B/C remedial investigation/feasibility study (RI/FS) addendum to DOE/RL-2008-46, *Integrated 100 Area Remedial Investigation/Feasibility Study (RI/FS) Work Plan*. A "target analyte" is defined as a constituent suspected of being site-related that is carried into an investigation plan for characterization through sampling and analysis by approved laboratory methods. Target analytes identified for 100 Area operable units must support RI/FS nature and extent characterization plus final remedial action decisions for source areas. This report also establishes the analyte exclusion criteria applicable for 100-B/C use and the analytical methods needed to analyze the target analytes.

2.0 APPROACH

The approach for development of vadose zone soil target analytes was a multi-step process. In Steps 1 and 2, initial target and master analyte lists were developed. The third step developed location-specific target analyte lists for waste sites where additional characterization is planned. Finally, the analyte list received regulatory review and input. This resulted in final location-specific target analytes.

Step 1 – Prepare Initial Target Analyte List

Remediation and characterization information (historic and current) were identified and reviewed to develop an initial list of target analytes. The list of initial target analytes represents potential contaminants in the vadose zone. The following types of reference documents and information sources were evaluated:

- Focused feasibility studies (FFSs), limited field investigation (LFI) reports
- Interim action records of decision (IARODs)
- Cleanup verification documents (cleanup verification packages [CVPs], remaining sites verification packages [RSVPs])
- Technical baseline reports
- Databases containing analytical data resulting from these activities (i.e., characterization, remediation, waste management information)
- Other pertinent documents.

Step 2 – Prepare Master Target Analyte List

After the initial target analyte list is compiled, the information underwent additional evaluation to refine the list to a master target analyte list. The master target analyte list is comprehensive and includes all analytes with credible potential to be present in the vadose zone above action thresholds. The following steps were taken to prepare the master decision unit target analyte list:

- Apply the following exclusion criteria to the initial set of target analytes.
 - Radionuclides with a half-life of 3 years or less (and no significant daughters).
 - Naturally occurring radionuclides that are not associated with past Hanford processes in the 100 Area (e.g., potassium-40).
 - Radionuclides potentially present only as trace impurities in solid irradiated materials.
 - Essential nutrients for human nutrition. Recommended daily allowances are developed for essential nutrients to estimate safe and adequate daily dietary intakes (NRC 1989, *Recommended Daily Allowances*).
 - Analytes that have no toxicity values (based on the hierarchy of toxicity values recommended by the U. S. Environmental Protection Agency (EPA) in Human Health Toxicity Values for Superfund Risk Assessments [OSWER Directive 9285.7-53]).
 - Common laboratory contaminants.
- Compare the resulting list for vadose zone soil with the contaminant of potential concern (COPC) list developed for the groundwater operable unit. Groundwater COPCs not found on the soil target analyte list were further evaluated to determine if there is a valid basis for their inclusion.

Appropriate analytical methods and estimated quantitation limits were then identified for the resulting master target analyte list.

Step 3 – Develop Location-Specific Target Analyte List

Location-specific target analytes were identified for each waste site from the master list using the following approach.

- Identify contaminants of concern (COCs) and COPCs for each specific waste site where characterization is proposed from the applicable IAROD (which reflects information from LFI and technical baseline reports). The default decision was to carry these analytes forward as target analytes for characterization unless a specific basis was available to eliminate them.
- Identify COCs and COPCs for each specific waste site where characterization is proposed from the site-specific interim cleanup verification documentation (typically developed based on the applicable IAROD). The default decision was to carry these analytes forward as target analytes for characterization unless a specific basis was available to eliminate them.

- Retain any analyte identified globally as a 100-B/C groundwater COPC as a soil target analyte.
- Remaining analytes on the master list were then considered individually on a site-specific basis. The default decision was to carry these analytes forward as target analytes for characterization unless a specific basis was available to eliminate them.

Step 4 – Agency Review of Locations and Location-Specific Target Analyte Lists

The lead regulatory agency for the 100-B/C Area (EPA) was consulted during the process to determine if adjustments were required to address additional information needs for each site. General process and site-specific input from EPA has been included in the final lists developed for each waste site.

3.0 ASSUMPTIONS

- Older analytical data (e.g., pre-*Comprehensive Environmental Response, Compensation, and Liability Act of 1980* [CERCLA]) reflect laboratory state-of-the-art procedures. Analytical methods have improved, resulting in lower detection limits for many analytes and better data quality assurance/quality control.
- Characterization activities implemented since initiating remediation under the IARODs may provide additional contaminant information that should be considered during pending RI/FS field investigations.
- Post-remediation characterization and cleanup verification data reflect focused lists of analytes that are unique to each waste site and have been evaluated against IAROD cleanup requirements.
- Examining existing data and waste site process information will be useful in developing laboratory analytical needs for RI/FS characterization tasks.
- Universally-accepted exclusion criteria may be applied to the initial target analyte list to develop a “master” target analyte list.
- Additional exclusion criteria (e.g., statistical Hanford Site background comparisons, infrequently detected analytes, and analytes not detected at concentrations/activities exceeding required cleanup levels) may be applied during the RI/FS process as more data become available.

4.0 SOFTWARE CONSIDERATIONS

No statistical or algebraic calculations were performed for this activity. The evaluations conducted included analyte comparisons/sorting using Microsoft® Excel®.

5.0 SOIL TARGET ANALYTE LIST DEVELOPMENT

Step 1 – 100-B/C Initial Target Analyte List

1. The documents listed in Table 1 were used to develop the 100-B/C target analyte list.

CVP = cleanup verification package

RSVP = remaining sites verification package

Step 2 – 100-B/C Master Target Analyte List

The exclusion criteria identified in Section 2 were applied to the initial soil target analyte list to identify the excluded analytes listed in Table 3. The list of groundwater COPCs was then reviewed to reconcile potential gaps. This resulted in the addition of thallium, 1,1-dichloroethene, 1,1,2,2-tetrachloroethane, chloroform, tetrachloroethene, trichloroethene, and vinyl chloride for soil. Radium-228 was identified as a groundwater COPC but was not added for soil based on soil exclusion criteria.

Exclusion of the analytes listed in Table 3 and inclusion of additional groundwater COPCs resulted in the master target analyte list presented in Table 4.

Table 3. 100-B/C Soil Analytes Broadly Excluded from Further Consideration. (2 Pages)

Analyte	Exclusion Rationale
Radionuclides	
1. Cobalt-58	Half-life less than 3 years (70.856 d), stable daughter product
2. Cesium-134	Half-life less than 3 years (2.0662 y), stable daughter product
3. Ruthenium-106	Half-life less than 3 years (1.0235 y), stable daughter product
4. Sodium-22	Half-life less than 3 years (2.6036 y), stable daughter product
5. Potassium-40	Naturally-occurring background radiation not associated with 100 Area processes
6. Radium-226	Naturally-occurring background radiation not associated with 100 Area processes (insufficient in-growth time for potential introduction as decay daughter of Hanford U-234/Th-230)
7. Radium-228	Naturally-occurring background radiation not associated with 100 Area processes (present in secular equilibrium with parent Th-232 isotope)
8. Silver 108m	Present only as a potential trace impurity in certain irradiated materials; no confirmed detections in 100 Area samples to-date

Table 3. 100-B/C Soil Analytes Broadly Excluded from Further Consideration. (2 Pages)

Analyte	Exclusion Rationale
9. Thorium-228	Naturally-occurring background radiation not associated with 100 Area processes (present in secular equilibrium with parent Ra-228 isotope)
10. Thorium-232	Naturally-occurring background radiation not associated with 100 Area processes
Nonradionuclides	
11. Acetone	Laboratory contaminant
12. bis[2-Ethylhexyl]phthalate	Laboratory contaminant
13. Di-n-butylphthalate	Laboratory contaminant
14. Methylene chloride	Laboratory contaminant
15. Calcium	Essential nutrient
16. Iron	Essential nutrient
17. Magnesium	Essential nutrient
18. Potassium	Essential nutrient
19. Sulfate	No toxicity information available
20. delta-BHC	No toxicity information available

102. Uranium (total) ^d	1	240	3.21	3.21	23. U-KPA or via isotopic analysis

^a Preliminary remediation goals for individual radionuclides are based on attainment of total radionuclide excess dose rates as well as radionuclide-specific requirements. Additional details for the determination of these values are provided in DOE/RL-96-17. Preliminary remediation goals for human health for chemicals are calculated per WAC 173-340, Method B for (Ecology 2007) using input parameters from the most current values from Ecology's Cleanup Levels and Risk Calculations database (updated February 12, 2009) and including appropriate consideration of background and achievable quantitation limits per WAC 173-340 (Ecology 2007). Calculated soil values for protection of the Columbia River assume a groundwater-to-river dilution attenuation factor of 2 based on practice for interim remedial actions.

^b If strong gamma emissions interfere with analysis of Am-241, Am-241 can be analyzed using a Cm/Am Alpha Emission Analysis method.

^c Radionuclide is not predicted to impact groundwater (and, thus, the Columbia River) in 1,000 years based on modeling assuming no uncontaminated vadose zone.

^d Analyte identified as a groundwater contaminant of potential concern.

^e Tasks are included in DOE/RL-2008-46, *Integrated 100 Area Remedial Investigation/Feasibility Study Work Plan* to reevaluate arsenic and hexavalent chromium cleanup levels. Values listed for arsenic are based on the use of WAC 173-340, Method A for approved interim remedial action goals, further described in DOE/RL-96-17.

^f Carcinogenic cleanup level calculated based on the inhalation exposure pathway per WAC 173-340-750 (Method B for air quality) and an airborne particulate mass loading rate of 0.0001 g/m³.

-- = not applicable

EPA = U.S. Environmental Protection Agency

GC = gas chromatograph

IC = ion chromatography

ICP = inductively coupled plasma

KPA = kinetic phosphorescence analysis

LSC = liquid scintillation counting

PAH = polycyclic aromatic hydrocarbon

PCB = polychlorinated biphenyl

SVOA = semi-volatile organic analysis

VOA = volatile organic analysis

WAC = Washington Administrative Code

Steps 3 and 4 – Location Specific Target Analyte Identification and Agency Input

1. The IAROD COCs and COPCs for each specific waste site where characterization is proposed were identified (which reflects information from LFI and technical baseline reports). The default decision was to carry these analytes forward as target analytes for site-specific characterization unless a specific basis was available to eliminate them.
2. The interim cleanup verification COCs and COPCs for each specific waste site where characterization is proposed were identified. The default decision was to carry these analytes forward as target analytes for site-specific characterization unless a specific basis was available to eliminate them.
3. Global 100-B/C groundwater COPCs were identified. These analytes were retained for site-specific characterization without further consideration, with the exception of total uranium,

total petroleum hydrocarbons, and radionuclides for the 118-B-6 Burial Ground. Radioactive risk is a greater driver for uranium in soil than chemical risk; uranium isotopes were evaluated on a site-by-site basis, and total uranium was excluded for all sites. Total petroleum hydrocarbons were identified as a groundwater COPC based on inclusion in the soil master target analyte list and limited available groundwater data. Total petroleum hydrocarbons were evaluated for inclusion for soils on a site-specific basis. Sufficient basis is available from remediation of the 118-B-6 Burial Ground to preclude the need for additional analysis for all radionuclides.

4. The remaining analytes from the 100-B/C master list were considered individually on a site-specific basis. The default decision was to carry these analytes forward as target analytes for characterization unless a specific basis was available to eliminate them. Specific lead agency input was incorporated in these considerations.

Analytes that were not retained for site-specific characterization at any of the proposed waste sites at the conclusion of this process are listed in Table 5 for convenience.

Table 5. Analytes Excluded for All Proposed Characterization Locations. (3 Pages)

Analyte	Exclusion Basis
1. Plutonium-241	Component of spent nuclear fuel that does not measurably contribute to potential risk relative to its ratio to other constituents of spent nuclear fuel
2. Phenol	No environmental persistence – readily biodegradable organic compound
3. Dalapon	No known discharges of herbicides to waste sites proposed for characterization. No significant detections of herbicides (relative to action thresholds) in 100 Area soil samples collected to-date.
4. DB;2,4-[4-(2,4-dichlorophenoxy)butanoic acid] (Butoxone)	
5. Dicamba	
6. Dichlorophenoxy-acetic acid; 2,4-	
7. Dichloroprop	
8. Dinoseb	
9. Picloram	
10. TP-; 2,4,5-(2,4,5-Trichlorophenoxy) Propionic acid, 2]	
11. Trichlorophenoxy-acetic acid; 2,4,5-(2,4,5-T)	
12. Aldrin	No known discharges of pesticides to waste sites proposed for characterization. Potential incidental discharges would not be significant relative to other waste streams.
13. Dichlorodiphenyl-di-chlorethane (4,4'-DDD)	
14. Dichlorodiphenyl-di-chloro-ethylene (4,4'-DDE)	
15. Dichlorodiphenyltri-chloro-ethane (4,4'-DDT)	
16. Dieldrin	
17. Endosulfan I	
18. Endosulfan II	

Table 5. Analytes Excluded for All Proposed Characterization Locations. (3 Pages)

Analyte	Exclusion Basis
19. Endosulfan sulfate	
20. Endrin	
21. Endrin aldehyde	No known discharges of pesticides to waste sites proposed for characterization. Potential incidental discharges would not be significant relative to other waste streams.
22. Endrin ketone	
23. Hexachlorocyclo-hexane; alpha (alpha-BHC, HCH)	
24. Hexachlorocyclohexane; beta (beta-BHC, HCH)	
25. Hexachlorocyclo-hexane; delta (delta-BHC, HCH)	
26. Lindane (Gamma-BHC) (1,2,3,4,5,6-hexachlorocyclo-hexane)	
27. Heptachlor	
28. Heptachlor epoxide	
29. Methoxychlor	
30. Technical chlordane (alpha and gamma)	
31. Butylbenzylphthalate	
32. Dibenzofuran	No known discharges of these organics to waste sites proposed for characterization. No significant detections of herbicides (relative to action thresholds) in 100 Area soil samples collected to-date.
33. Diethylphthalate	
34. Di-n-octylphthalate	
35. Isophorone	
36. Methylnaphthalene; 2-	
37. Methyl isobutyl ketone (4-Methyl-2-pentanone)	
38. Methyl phenol; 4-	
39. N-nitrosodiphenyl-amine	
40. Pentachlorophenol	
41. Toluene	
42. Trichlorbenzene; 1,2,4-	
43. Xylenes (total)	
44. Carbazole	These organics are potentially present only in association with oils and solid bituminous materials used in construction. These compounds do not represent a significant potential contributor to cumulative risk in the quantities they would be present in relative to other polycyclic aromatic hydrocarbons.
45. Acenaphthene	
46. Anthracene	
47. Fluorene	
48. Molybdenum	Not associated with Hanford processes except as solid metals in equipment and in trace impurities.
49. Tin	
50. Titanium	
51. Vanadium	

Table 5. Analytes Excluded for All Proposed Characterization Locations. (3 Pages)

Analyte	Exclusion Basis
52. Strontium	Not significant as a non-radionuclide. Radioactive risk is a greater driver for strontium-90 than chemical risk.
53. Asbestos	Potentially present in mastic coatings and facilities, but would not have an impact to remaining soils.
54. Uranium (total)	Radioactive risk is a greater driver for uranium than chemical risk. Uranium isotopes are addressed on a site-by-site basis.
55. Nitrite	Limited environmental persistence; not associated with waste sites proposed for characterization.

The product of steps three and four is the identification of location-specific target analyte lists for the remedial investigation. Tables 6 through 14 present the target analytes that were retained and analytes that were excluded on a site-specific basis.

Table 6. 100-B-5 Trench Target Analytes. (3 Pages)

Retained Analytes	
Target Analyte	Inclusion Rationale
1. Americium-241	IAROD/CVP
2. Cesium-137	IAROD/CVP; groundwater COPC
3. Cobalt-60	IAROD/CVP; groundwater COPC
4. Europium-152	IAROD/CVP
5. Europium-154	IAROD/CVP
6. Europium-155	IAROD/CVP; groundwater COPC
7. Nickel-63	Potentially present with other fission products as a contributor to cumulative risk; groundwater COPC
8. Plutonium-238	IAROD/CVP
9. Plutonium-239/240	IAROD/CVP
10. Strontium-90	IAROD/CVP; groundwater COPC
11. Iodine-129	Groundwater COPC
12. Tritium	Groundwater COPC
13. Carbon-14	Groundwater COPC
14. Technetium-99	Groundwater COPC
15. Antimony	Groundwater COPC
16. Arsenic	Groundwater COPC
17. Beryllium	Groundwater COPC
18. Boron	Incomplete basis for exclusion – potentially present due to use in reactor and potential ecological risk driver
19. Cadmium	Groundwater COPC

Table 6. 100-B-5 Trench Target Analytes. (3 Pages)

20. Chromium (total)	IAROD/CVP; groundwater COPC
21. Cobalt	Groundwater COPC
22. Copper	Groundwater COPC
23. Lead	Groundwater COPC
24. Manganese	Groundwater COPC
25. Nickel	Groundwater COPC
26. Selenium	Groundwater COPC
27. Silver	Incomplete basis for exclusion
28. Thallium	Groundwater COPC
29. Zinc	Groundwater COPC
30. Mercury	IAROD/CVP; groundwater COPC
31. Chromium (hexavalent)	IAROD/CVP; groundwater COPC
32. 1,1-Dichloroethene	Groundwater COPC
33. 1,1,2,2-Tetrachloroethane	Groundwater COPC
34. Benzene	Groundwater COPC
35. Carbon tetrachloride	Groundwater COPC
36. Chloroform	Groundwater COPC
37. Tetrachloroethene	Groundwater COPC
38. Trichloroethene	Groundwater COPC
39. Vinyl chloride	Groundwater COPC
40. Nitrate	Groundwater COPC
Excluded Analytes	
Target Analyte	Exclusion Rationale
1. Uranium-233/234	Not present at activities significant for potential cumulative dose risk near the preliminary remediation goal relative to other isotopes in general radioactive liquid effluent waste. Uranium-238 was not detected was not detected above background levels in previous cleanup verification sampling.
2. Uranium-235	
3. Uranium-238	
4. Aluminum	Not associated with reactor cooling systems except as solid metals and in trace impurities.
5. Barium	
6. Lithium	
7. Benzo(a)anthracene	May have been present in former pipe mastic coatings and sealants. No significant discharge of organic chemicals to radioactive liquid effluent process sewers.
8. Benzo(a)pyrene	
9. Benzo(b)fluoranthene	
10. Benzo(k)fluoranthene	
11. Benzo(g,h,i)perylene	
12. Chrysene	
13. Dibenzo(a,h) anthracene	
14. Fluoranthene	
15. Indeno(1,2,3-cd)pyrene	

Table 6. 100-B-5 Trench Target Analytes. (3 Pages)

16. Naphthalene	
17. Phenanthrene	
18. Pyrene	
19. Total petroleum hydrocarbons	
20. Aroclor-1016	Potentially present in radioactive liquid waste only as a trace impurity from sealing compounds. Past water leakage from pipelines would not contain an environmentally significant total inventory.
21. Aroclor-1221	
22. Aroclor-1232	
23. Aroclor-1242	
24. Aroclor-1248	
25. Aroclor-1254	
26. Aroclor-1260	

COPC = contaminant of potential concern

CVP = cleanup verification package

IAROD = interim action Record of Decision

Table 7. 116-B-5 Crib Target Analytes. (3 Pages)

<i>Retained Analytes</i>	
Target Analyte	Inclusion Rationale
1. Cesium-137	IAROD/closure documentation; groundwater COPC
2. Cobalt-60	IAROD/closure documentation; groundwater COPC
3. Europium-152	IAROD/closure documentation
4. Europium-154	IAROD/closure documentation
5. Europium-155	IAROD/closure documentation; groundwater COPC
6. Nickel-63	Potentially present with other fission products as a contributor to cumulative risk; groundwater COPC
7. Technetium-99	Groundwater COPC
8. Tritium	Associated with site process history; groundwater COPC
9. Iodine-129	Groundwater COPC
10. Strontium-90	Groundwater COPC
11. Carbon-14	Groundwater COPC
12. Antimony	Groundwater COPC
13. Arsenic	Groundwater COPC
14. Barium	IAROD/closure documentation
15. Beryllium	Groundwater COPC
16. Boron	Incomplete basis for exclusion – potential ecological risk driver
17. Cadmium	Groundwater COPC
18. Chromium (total)	Groundwater COPC
19. Cobalt	Groundwater COPC

Table 7. 116-B-5 Crib Target Analytes. (3 Pages)

20. Copper	Groundwater COPC
21. Lead	Groundwater COPC
22. Manganese	Groundwater COPC
23. Nickel	Groundwater COPC
24. Selenium	Groundwater COPC
25. Silver	Incomplete basis for exclusion
26. Thallium	Groundwater COPC
27. Zinc	Groundwater COPC
28. Mercury	IAROD/closure documentation; groundwater COPC
29. Chromium (hexavalent)	Groundwater COPC
30. 1,1-Dichloroethene	Groundwater COPC
31. 1,1,2,2-Tetrachloroethane	Groundwater COPC
32. Benzene	Groundwater COPC
33. Carbon tetrachloride	Groundwater COPC
34. Chloroform	Groundwater COPC
35. Tetrachloroethene	Groundwater COPC
36. Trichloroethene	Groundwater COPC
37. Vinyl Chloride	Groundwater COPC
38. Nitrate	Groundwater COPC
Excluded Analytes	
Target Analyte	Exclusion Rationale
1. Americium-241	Not associated with tritium separation/production process.
2. Plutonium-238	
3. Plutonium-239/240	
4. Uranium-233/234	
5. Uranium-235	
6. Uranium-238	
7. Aluminum	Associated with tritium production process only as solid metals; no credible potential for discharge to crib.
8. Lithium	
9. Benzo(a)anthracene	May have been present in former pipe mastic coatings and sealants. No known or expected discharges of oils to crib.
10. Benzo(a)pyrene	
11. Benzo(b)fluoranthene	
12. Benzo(k)fluoranthene	
13. Benzo(g,h,i)perylene	
14. Chrysene	
15. Dibenzo(a,h) anthracene	
16. Fluoranthene	
17. Indeno(1,2,3-cd)pyrene	
18. Naphthalene	
19. Phenanthrene	
20. Pyrene	

Table 7. 116-B-5 Crib Target Analytes. (3 Pages)

21. Total Petroleum Hydrocarbons	No known or expected discharges of oils to crib.
22. Aroclor-1016	
23. Aroclor-1221	
24. Aroclor-1232	
25. Aroclor-1242	
26. Aroclor-1248	
27. Aroclor-1254	
28. Aroclor-1260	

COPC = contaminant of potential concern

IAROD = interim action Record of Decision

Table 8. 116-B-6B Crib Target Analytes. (3 Pages)

Retained Analytes	
Target Analyte	Inclusion Rationale
1. Americium-241	Potentially present - limited available characterization data
2. Cesium-137	Potentially present - limited available characterization data; groundwater COPC
3. Cobalt-60	Potentially present - limited available characterization data; groundwater COPC
4. Europium-152	Potentially present - limited available characterization data
5. Europium-154	Potentially present - limited available characterization data
6. Europium-155	Potentially present - limited available characterization data; groundwater COPC
7. Carbon-14	Potentially present - limited available characterization data; groundwater COPC
8. Nickel-63	Potentially present with other fission products as a contributor to cumulative risk; groundwater COPC
9. Technetium-99	Groundwater COPC
10. Tritium	Groundwater COPC

34. 1,1-Dichlorethene	Groundwater COPC
35. 1,1,2,2-Tetrachloroethane	Groundwater COPC
36. Benzene	Groundwater COPC
37. Carbon tetrachloride	Groundwater COPC
38. Chloroform	Groundwater COPC
39. Tetrachloroethene	Groundwater COPC
40. Trichloroethene	Groundwater COPC
41. Vinyl chloride	Groundwater COPC
42. Benzo(a)anthracene	Incomplete basis for exclusion – may be present due to use of bituminous mastics and sealants; previously detected at trace concentrations
43. Benzo(a)pyrene	
44. Benzo(k)fluoranthene	
45. Chrysene	
46. Fluoranthene	
47. Total petroleum hydrocarbons	Incomplete basis for exclusion - potentially present based on polycyclic aromatic hydrocarbon detections
Excluded Analytes	
Target Analyte	Exclusion Rationale
1. Uranium-233/234	Not present at activities significant for potential cumulative dose risk near the preliminary remediation goal relative to other isotopes in general radioactive liquid effluent waste. Uranium-238 was not detected was not detected above background levels in previous cleanup verification sampling.
2. Uranium-235	
3. Aluminum	Not associated with reactor cooling systems except as solid metals and in trace impurities.
4. Barium	
5. Lithium	
6. Benzo(b)fluoranthene	Potentially formerly present in mastics and bituminous sealants, but not detected in previous characterization sampling.
7. Benzo(g,h,i)perylene	
8. Dibenzo(a,h)anthracene	
9. Indeno(1,2,3-cd)pyrene	
10. Naphthalene	
11. Pyrene	
12. Phenanthrene	

Table 14. 116-C-5 Retention Basin Target Analytes. (3 Pages)

13. Aroclor-1016	Not detected during previous limited field investigation characterization.
14. Aroclor-1221	
15. Aroclor-1232	
16. Aroclor-1242	
17. Aroclor-1248	
18. Aroclor-1254	
19. Aroclor-1260	

COPC = contaminant of potential concern

CVP = cleanup verification package

IAROD = interim action Record of Decision

6.0 CONCLUSIONS

This approach provides for a systematic identification of analytes of potential interest, considering available data and recognized potential deficiencies. The analytical methods identified in Table 4 should be verified and documented in the quality assurance project plan section of the sampling and analysis plan for the 100-B/C area remedial investigation. As additional soil and groundwater data become available, other suitable exclusion criteria should be considered and evaluated for use in the target analyte list development process.
