SGZ	surface ground zero

1.0 Introduction

The U.S. Department of Energy (DOE) Office of Legacy Management conducted annual sampling at the Rulison, Colorado, Site for the Long-Term Hydrologic Monitoring Program (LTHMP) on May 20–22 and 27, 2015. Several of the land owners were not available to allow access to their respective properties, which created the need for several sample collection trips. This report documents the analytical results of the Rulison monitoring event and includes the trip report and the data validation package (Appendix A). The groundwater and surface water monitoring were shipped to the GEL Group Inc. laboratories for analysis. All requested analyses were successfully completed. Samples were analyzed for gamma-emitting radionuclides by high-resolution gamma spectrometry. Tritium was analyzed using two methods, the conventional tritium method, which has a detection limit on the order of 400 picocuries per liter (pCi/L), and the enriched method (for selected samples), which has a detection limit on the order of 3 pCi/L.

2.0 Site Location and Background

The Rulison site is located in Garfield County in western Colorado (see Figure 1). The Rulison underground nuclear test was designed to evaluate the use of a nuclear detonation to fracture the tight, gas-bearing formations in the Piceance Basin for enhanced natural gas production. A 43-kiloton-yield nuclear device was detonated on September 10, 1969, at 8,426 feet below ground surface within the Williams Fork Formation of the Mesaverde Group.

Sampling locations (see Figure 2) are a combination of wells and surface water locations. Sampling locations range from within a few hundred feet from surface ground zero (SGZ) to more than 4 miles from SGZ. The U.S. Environmental Protection Agency (EPA) performed the LTHMP sampling from the program's inception in 1972 through 2007. Results of historical monitoring at the Rulison site have consistently shown that nuclear-test-related contamination has not impacted groundwater or surface water at the sampling locations.

In 2008, DOE reviewed all previous LTHMP data and evaluated future sampling locations. On the basis of approximately 35 years of groundwater and surface water sample results, the depth to the Rulison shot point, and limited options for transport, DOE concluded that monitoring distant groundwater and surface water locations was not an effective approach for detecting detonation-related contaminant migration. The evaluation concluded that an updated monitoring program focused on detecting immediate contaminant migration from the detonation zone was warranted. The updated monitoring program emphasizes the sampling of natural gas production wells in the vicinity of the Rulison site. Producing gas wells near the Rulison site are considered the most likely pathway for transporting detonation-derived contaminants. Results of the natural gas monitoring program can be found online at http://www.lm.doe.gov/Rulison/Documents.aspx under the heading "Natural Gas Well Monitoring Results." Although gas production wells are more likely to contain detonation-related contaminants, sampling will continue at groundwater and surface water locations near SGZ, as those locations are used to verify that no contaminants are migrating from the surface cleanup areas or detonation zone.

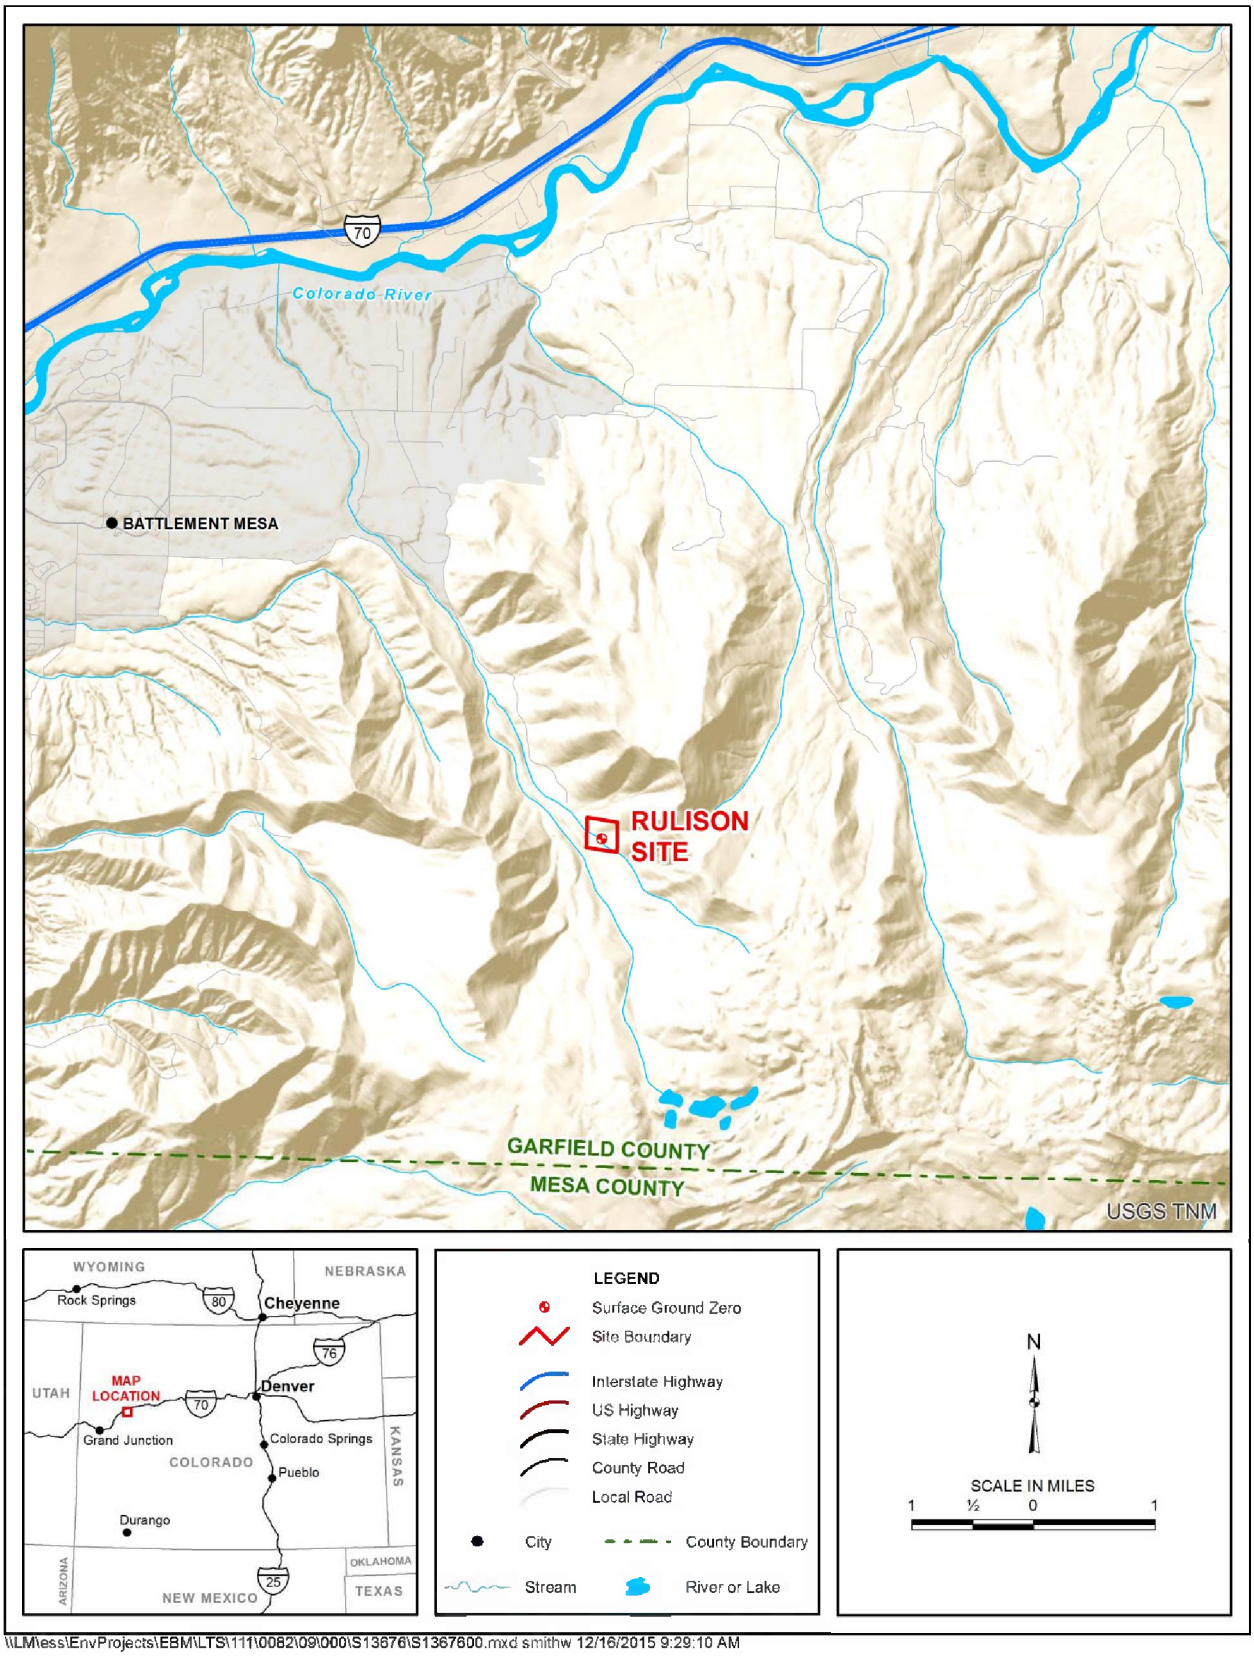

Figure 1. Rulison, Colorado, Site Location Map

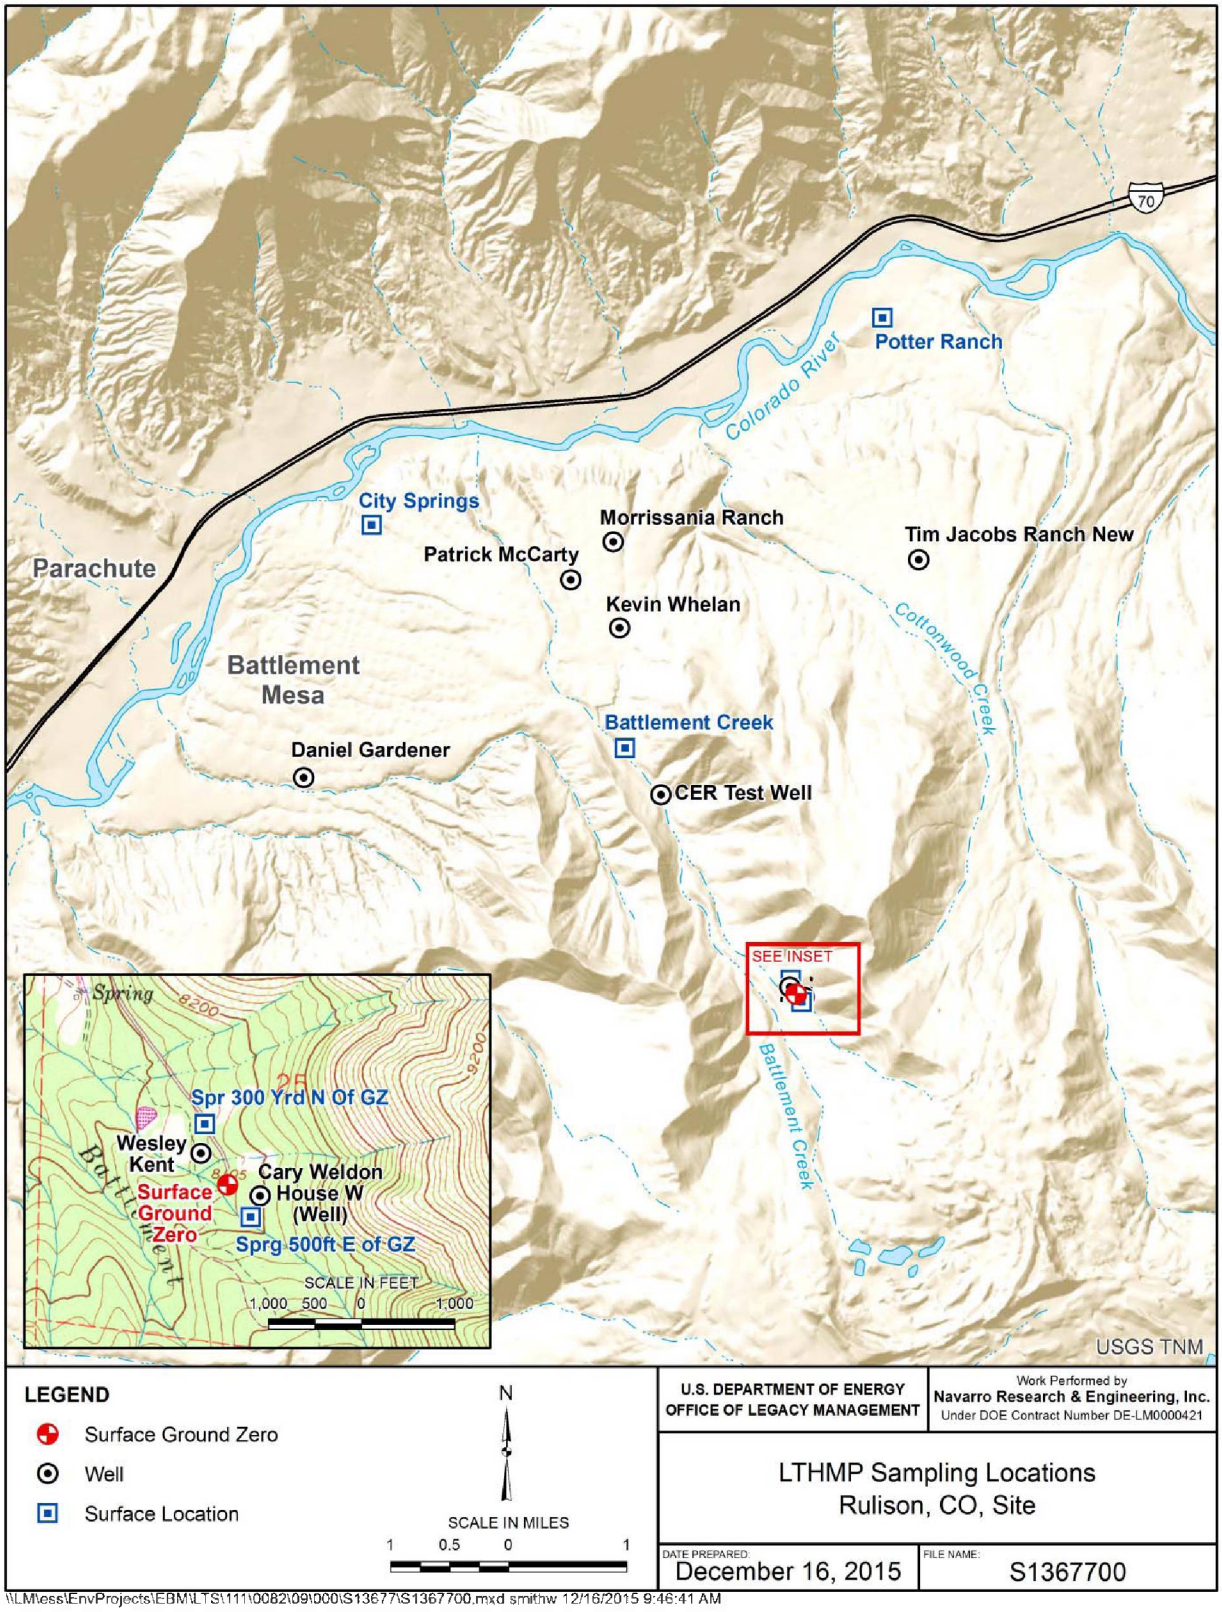

Figure 2. LTHMP Sampling Locations, Rulison, Colorado, Site

3.0 Sample Analytical Results

Table 1 shows the water sample analysis results for 2015. The results demonstrate that no detonation-related contaminants are impacting any of the sampling locations. Conventional tritium analysis for all of the sampling locations resulted in no detectable activity. The enriched tritium analysis detected low levels of tritium, as shown in Table 1. Figures 3 and 4 show historical enriched tritium analysis results, the EPA drinking water standard of 20,000 pCi/L, and a tritium decay line representing the tritium contamination in surface and near-surface water caused by fallout in precipitation from earlier atmospheric nuclear testing. The concentrations of the trend line are generalized for North America and are not site-specific concentrations or background for the Rulison site. The historical enriched tritium analysis results parallel the natural rate of tritium decay, an indication that additional tritium from detonation-related contamination is not being detected. Moreover, all tritium results are much lower than the EPA drinking water standard. No other radionuclides commonly associated with the detonation were detected by the high-resolution gamma spectrometry analysis. Specific radionuclides that were tested using gamma spectrometry are listed in the data validation package.

Table 1. Rulison LTHMP Water Sample Analysis Results

Sample Location	Collection Date	Tritium[a] Conventional Analysis (pCi/L)	Tritium Enriched Analysis (pCi/L)[b]	Gamma Spectrometry[c] Analysis (pCi/L)
Cary Weldon (private well)	5/21/15	ND		ND
Wesley Kent (private well)[d]	5/21/15	ND	16.9	ND
CER Test (private well)	5/22/15	ND		ND
Daniel Gardner (private well)	5/22/15	ND		ND
Kevin Whelan (private well)	5/21/15	ND		ND
Morrissania Ranch (private well)	5/21/15	ND	21.7	ND
Patrick McCarty (private well)	5/21/15	ND	19.0	ND
Tim Jacobs (private well)	5/21/15	ND		ND
City Springs (spring)	5/20/15	ND		ND
Spring 300 yd north of SGZ (spring)	5/21/15	ND		ND
Spring 500 ft east of SGZ (spring)	5/21/15[e]	ND		ND
Battlement Creek (creek)	5/22/15	ND		ND
Potter Ranch (spring)	5/27/15	ND		ND

Notes:
[a] Conventional tritium analyses had a detection limit on the order of 400 pCi/L.
[b] Enriched tritium analysis result; the quantifiable detection limit is on the order of 3 pCi/L.
[c] Gamma spectrometry detection limits are radionuclide-specific and sample-specific (see the data validation package in Appendix A for a specific listing of radionuclides tested).
[d] Well water is derived from a gravity-fed line from the spring (500 ft east of SGZ).
[e] Turbidity requirements were not met from the sample collected; therefore, the sample was filtered to meet turbidity requirements.

Abbreviations:
ND = not detected; yd = yards; ft = feet

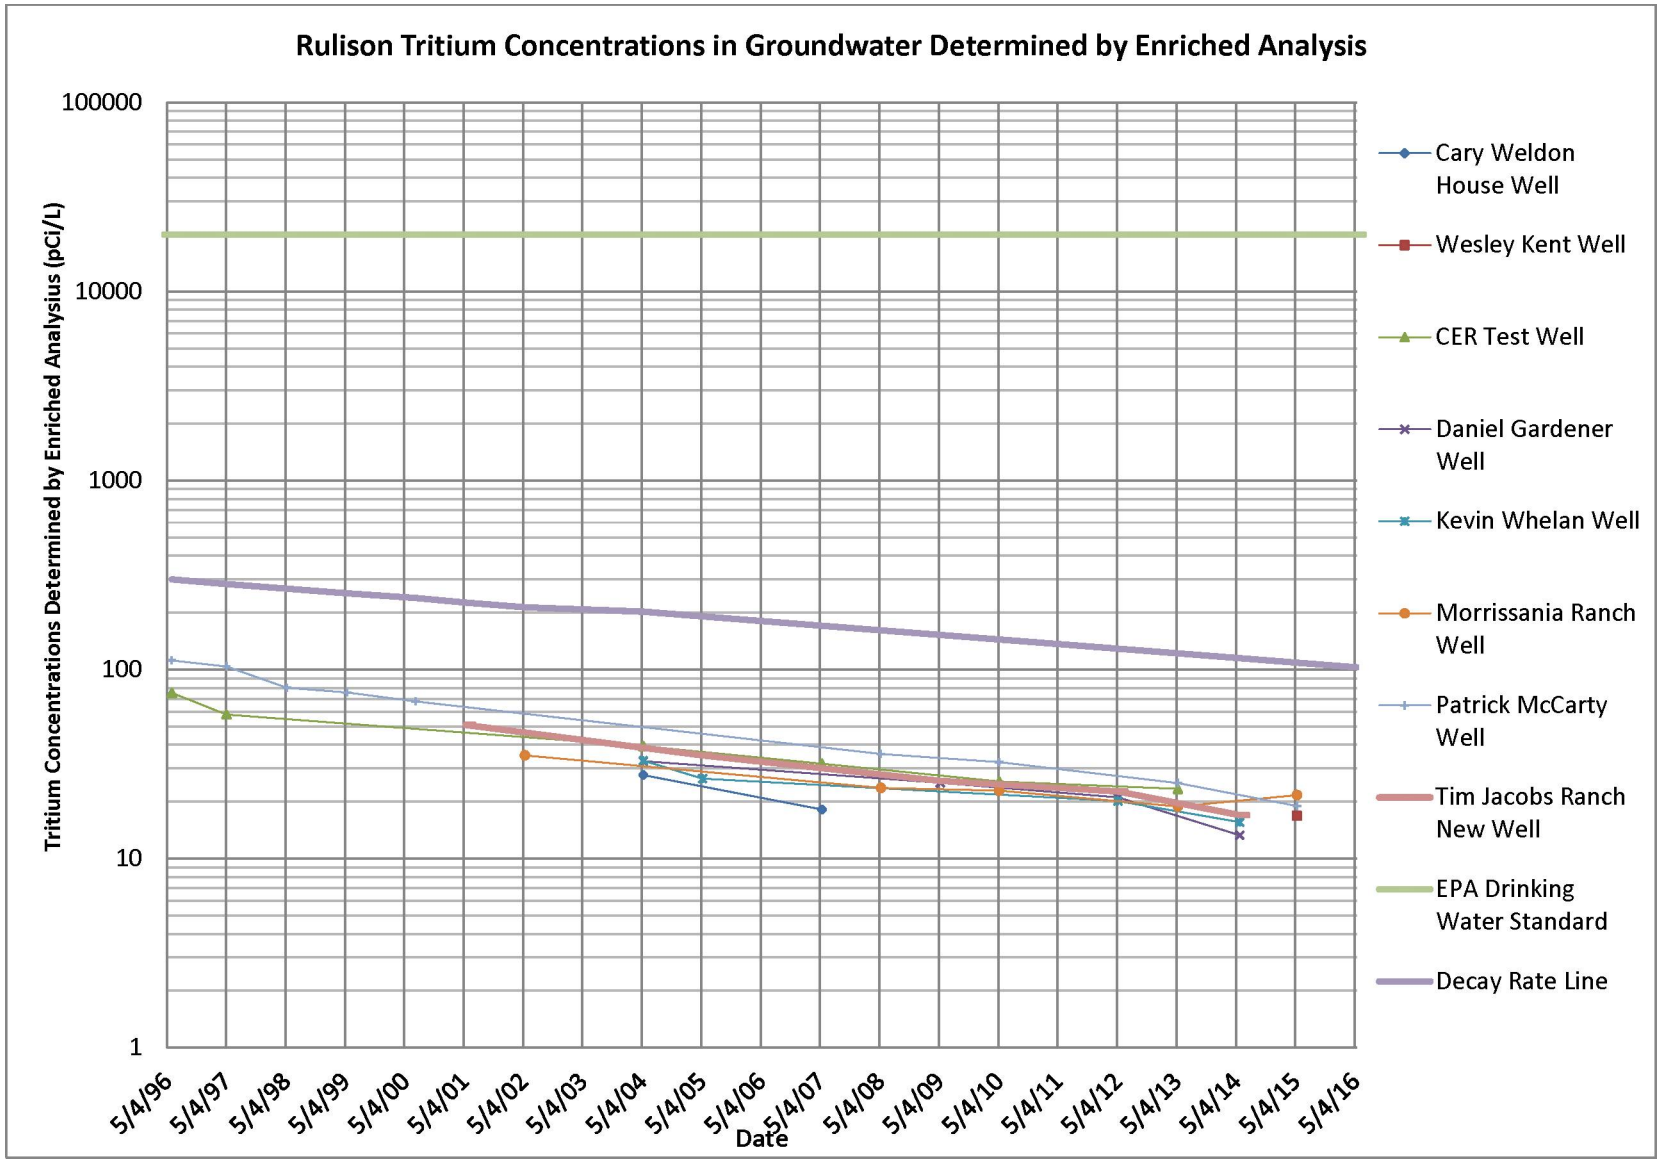

Figure 3. Rulison, Colorado Site, Tritium Concentrations in Groundwater Determined by Enriched Analysis
Note: Tritium decay line represents tritium fallout concentrations in precipitation from earlier atmospheric nuclear testing in surface and near-surface ground water (Brown, R.M., 1995. Monthly Tritium in Precipitation at Ottawa, Canada 1953–1995, Atomic Energy of Canada Limited, http://www.science.uottawa.ca/~eih/ch7/7tritium.htm)

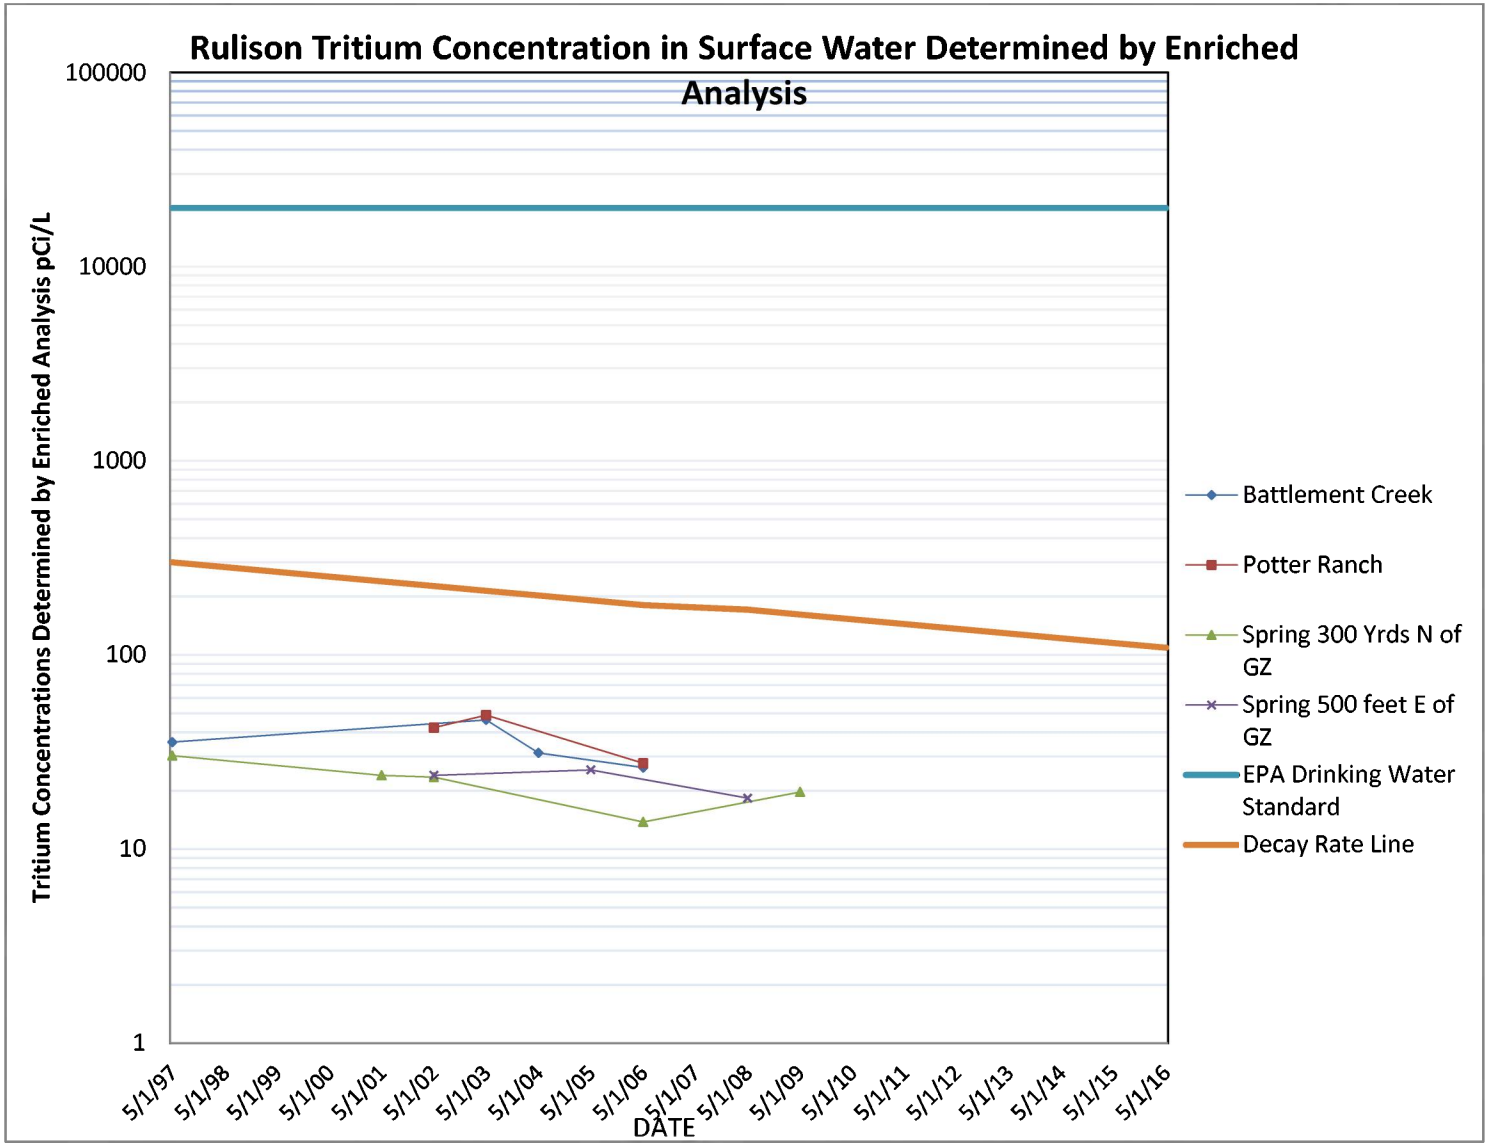

Figure 4. Rulison, Colorado Site, Tritium Concentrations in Surface Water Determined by Enriched Analysis
Note: Tritium decay line represents tritium fallout concentrations in precipitation from earlier atmospheric nuclear testing in surface and near-surface ground water (Brown, R.M., 1995. Monthly Tritium in Precipitation at Ottawa, Canada 1953–1995, Atomic Energy of Canada Limited, http://www.science.uottawa.ca/~eih/ch7/7tritium.htm)

No surface water locations had been sampled since the 2009 sampling event because of property owners' refusal to allow sampling teams on their respective properties. DOE requested that no surface locations in the area be sampled until property owners who were refusing access allowed sampling personnel to sample their locations. In 2015, access rights were granted and surface water and wells near SGZ were sampled. The Wesley Kent well location receives its water directly out of the spring designated 500 feet east of SGZ. The well configuration consists of a 2½ –3 inch pipe in the spring that gravity feeds into the wells' holding tank.

4.0 Conclusions

Contaminant concentrations in water samples collected at the Rulison site are consistent with historical analytical results. The results continue to verify that detonation-related contaminants have not impacted groundwater or surface water at the sampling locations.

Sampling Event Summary

Site: Rulison, Colorado, Site

Sampling Period: May 20-22 and 27, 2015

Annual sampling was conducted at the Rulison, Colorado, site for the Long-Term Hydrologic Monitoring Program May 20-22 and 27, 2015, to monitor groundwater and surface water for potential radionuclide contamination. Sampling and analyses were conducted as specified in *Sampling and Analysis Plan for U.S. Department of Energy Office of Legacy Management Sites*. (LMS/PRO/S04351, continually updated). A duplicate sample was collected from location "Cary Weldon House W." Samples were analyzed by GEL Laboratories in Charleston, South Carolina. Samples were analyzed for gamma-emitting radionuclides by high-resolution gamma spectrometry and for tritium using the conventional and enrichment methods.

The electrolytic enrichment method for tritium analysis yielded positive results for the samples analyzed ranging from 10.2 to 11.6 picocuries per liter (pCi/L). These results are consistent with background levels for tritium and are well below the U.S. Environmental Protection Agency (EPA) drinking-water standard for tritium of 20,000 pCi/L. All high-resolution gamma spectrometry results were below detectable concentrations. The results from this sampling event indicate that groundwater and surface water supplies in the area have not been impacted by detonation-related contaminants.

Water Sampling Field Activities Verification Checklist

Project	Rulison, Colorado	**Date(s) of Water Sampling**	May 20-22 and 27, 2015
Date(s) of Verification	September 8, 2015	**Name of Verifier**	Stephen Donivan

	Response (Yes, No, NA)	Comments
1. Is the SAP the primary document directing field procedures?	Yes	
List any Program Directives or other documents, SOPs, instructions.		Work Order letter dated April 24, 2015.
2. Were the sampling locations specified in the planning documents sampled?	Yes	
3. Were calibrations conducted as specified in the above-named documents?	Yes	Calibrations were performed on May 15, 2015.
4. Was an operational check of the field equipment conducted daily?	Yes	
Did the operational checks meet criteria?	Yes	
5. Were the number and types (alkalinity, temperature, specific conductance, pH, turbidity, DO, ORP) of field measurements taken as specified?	Yes	
6. Were wells categorized correctly?	Yes	
7. Were the following conditions met when purging a Category I well:		
Was one pump/tubing volume purged prior to sampling?	NA	There were no Category I wells.
Did the water level stabilize prior to sampling?		
Did pH, specific conductance, and turbidity measurements meet criteria prior to sampling?		
Was the flow rate less than 500 mL/min?		

Water Sampling Field Activities Verification Checklist (continued)

	Response (Yes, No, NA)	Comments
8. Were the following conditions met when purging a Category II well:		
Was the flow rate less than 500 mL/min?	Yes	
Was one pump/tubing volume removed prior to sampling?	Yes	
9. Were duplicates taken at a frequency of one per 20 samples?	Yes	A duplicate sample was collected at location Cary Weldon House W.
10. Were equipment blanks taken at a frequency of one per 20 samples that were collected with non-dedicated equipment?	NA	An equipment blank was not required.
11. Were trip blanks prepared and included with each shipment of VOC samples?	NA	
12. Were the true identities of the QC samples documented?	Yes	
13. Were samples collected in the containers specified?	Yes	
14. Were samples filtered and preserved as specified?	Yes	
15. Were the number and types of samples collected as specified?	Yes	
16. Were chain of custody records completed and was sample custody maintained?	Yes	
17. Was all pertinent information documented on the field data sheets?	Yes	
18. Was the presence or absence of ice in the cooler documented at every sample location?	NA	Sample cooling was not required.
19. Were water levels measured at the locations specified in the planning documents?	Yes	

Laboratory Performance Assessment

General Information

Report Number (RIN):	15057039
Sample Event:	May 20-22 and 27, 2015
Site(s):	Rulison, Colorado, Site
Laboratory:	GEL Laboratories, Charleston, South Carolina
Work Order No.:	374039
Analysis:	Radiochemistry
Validator:	Stephen Donivan
Review Date:	September 1, 2015

This validation was performed according to the *Environmental Procedures Catalog*, (LMS/POL/S04325, continually updated) "Standard Practice for Validation of Environmental Data." The procedure was applied at Level 3, Data Validation. See attached Data Validation Worksheets for supporting documentation on the data review and validation. All analyses were successfully completed. The samples were prepared and analyzed using accepted procedures based on methods specified by line item code, which are listed in Table 1.

Table 1. Analytes and Methods

Analyte	Line Item Code	Prep Method	Analytical Method
Gamma Spectrometry	GAM-A-001	EPA 901.1	EPA 901.1
Tritium, Enrichment Method	LMR-17	DOE HASL 300	DOE HASL 300
Tritium	LSC-A-001	EPA 906.0m	EPA 906.0m

Data Qualifier Summary

None of the analytical results required qualification.

Sample Shipping/Receiving

GEL Laboratories in Charleston, South Carolina, received 14 water samples on May 29, 2015, accompanied by a Chain of Custody form. The Chain of Custody form was checked to confirm that all of the samples were listed with sample collection dates and times, and to confirm signatures and dates were present indicating sample relinquishment and receipt. The Chain of Custody was complete and had no errors or omissions.

Preservation and Holding Times

The sample shipment was received intact at ambient temperature, which complies with requirements. The sample aliquots were received in the correct container types and had been preserved correctly for the requested analyses. All analyses were completed within the applicable holding times.

Detection and Quantitation Limits

Radiochemical results are evaluated using the minimum detectable concentration (MDC), Decision Level Concentration (DLC), and Determination Limit (DL). The MDC is a measure of radiochemical method performance and was calculated and reported as specified in *Quality Systems for Analytical Services*. The DLC is the minimum concentration of an analyte that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, while estimated at 3 times the 1-sigma total propagated uncertainty. Results which are greater than the MDC, but less than the DLC, are qualified with a "U" flag (not detected). The DL for radiochemical results is the lowest concentration that reliably can be measured and is defined as 3 times the MDC. Results not previously "U" qualified that are less than the DL are qualified with a "J" flag as estimated values.

The reported MDCs for radiochemical analytes demonstrate compliance with contractual requirements.

Laboratory Instrument Calibration

Compliance requirements for satisfactory instrument calibration are established to ensure that the instrument is capable of producing acceptable qualitative and quantitative data for all analytes. Initial calibration demonstrated that the instrument was capable of acceptable performance in the beginning of the analytical run. Compliance requirements for continuing calibration checks are established to ensure that the instrument continues to be capable of producing acceptable qualitative and quantitative data. All laboratory instrument calibrations were performed correctly in accordance with the cited methods. All calibration and laboratory-spike standards were prepared from independent sources.

Radiochemical Analysis

Tritium
Instrument quench-calibration curves were generated on August 1, 2015. The daily instrument checks performed on July 9 and August 14, 2015, met the acceptance criteria.

Gamma Spectrometry
The gamma-spectrometry efficiency calibrations were performed within a year prior to sample analysis. All daily calibration and background-check results met the acceptance criteria.

Method Blanks

Method blanks are analyzed to assess any contamination that may have occurred during sample preparation. All methodology blank results associated with the samples were below the DLC for all analytes.

Matrix Spike Analysis

Matrix spike and matrix-spike duplicate samples were analyzed for tritium as a measure of method performance in the sample matrix. All spike results were within the acceptance range.

Laboratory Replicate Analysis

Laboratory replicate analyses are used to determine laboratory precision for each sample matrix. The relative error ratio for radiochemical replicate results (calculated using the 1-sigma total propagated uncertainty) was less than three, indicating acceptable precision.

Laboratory Control Sample

Laboratory control samples were analyzed at the correct frequency to provide information on the accuracy of the analytical method and the overall laboratory performance, including sample preparation. All control sample results were acceptable.

Completeness

Results were reported in the correct units for all analytes requested using contract-required laboratory qualifiers.

Electronic Data Deliverable (EDD) File

The EDD file arrived on August 27, 2015. The Sample Management System EDD validation module was used to verify that the EDD files were complete and in compliance with requirements. The module compares the contents of the file to the requested analyses to ensure all and only the requested data are delivered. The contents of the EDD were manually examined to verify that the sample results accurately reflect the data contained in the sample data package.

Sampling Quality Control Assessment

The following information summarizes and assesses quality control for this sampling event.

Sampling Protocol

Location CER Test Well was sampled using a dedicated bladder pump as a Category II well. Data from this well are qualified with the "FQ" flags in the database, which indicate the well was Category II, purged and sampled using the low-flow sampling method. All other sample locations were domestic wells or surface water locations.

Equipment Blank

Equipment blanks are prepared and analyzed to document contamination attributable to the sample collection process. An equipment blank was not required.

Field Duplicate Analysis

Field duplicate samples are collected and analyzed as an indication of overall precision of the measurement process. The precision observed includes both field and laboratory precision and has more variability than laboratory duplicates, which measure only laboratory performance. A duplicate sample was collected from location Cary Weldon House W. For radiochemical measurements, the relative-error ratio (the ratio of the absolute difference between the sample and duplicate results and the sum of the 1-sigma uncertainties) was used to evaluate duplicate results and should be less than 3. All duplicate results met this criteria thereby demonstrating acceptable precision.

Potential Outliers Report

This page intentionally left blank

Potential Outliers Report

Potential outliers are measurements which are extremely large or small relative to the rest of the data and, therefore, are suspected of misrepresenting the population from which they were collected. Potential outliers can result from transcription errors, data-coding errors, or measurement system problems. However, outliers can also represent true extreme values of a distribution and can indicate more variability in the population than was expected.

Statistical-outlier tests give probabilistic evidence that an extreme value does not "fit" with the distribution of the remainder of the data and is therefore a statistical outlier. These tests should be used only to identify data points that require further investigation. The tests alone cannot determine whether a statistical outlier should be discarded or corrected within a data set.

There are three steps involved in identifying extreme values or outliers:

1. **Identify extreme values that may be potential outliers.** Do this by generating the Outliers Report using the Sample Management System from data in the environmental database. The application compares the new data set (in standard environmental database units) with historical data and lists the new data that fall outside the historical data range. A determination is made also as to whether the data are normally distributed using the Shapiro-Wilk Test.
2. **Apply the appropriate statistical test.** Dixon's Test for extreme values is used to test for statistical outliers when the sample size is less than or equal to 25. This test considers both extreme values that are much smaller than the rest of the data (case 1) and extreme values that are much larger than the rest of the data (case 2). This test is valid only if the data outside the suspected outlier are normally distributed. Rosner's Test is a parametric test that is used to detect outliers for sample sizes of 25 or more. This test also assumes that the data outside the suspected outliers are normally distributed.
3. **Scientifically review statistical outliers and decide on their disposition.** The review should include an evaluation of any notable trends in the data that may indicate the outliers represent true extreme values.

There were no potential outliers identified, and the data for this event are acceptable as qualified.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

LAB QUALIFIERS:
* Replicate analysis not within control limits.
> Result above upper detection limit.
B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
D Analyte determined in diluted sample.
E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
H Holding time expired, value suspect.
IIncreased detection limit due to required dilution.
J Estimated
N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
U Analytical result below detection limit.
W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:
F Low flow sampling method used.
L Less than 3 bore volumes purged prior to sampling.
U Parameter analyzed for but was not detected.
G Possible grout contamination, pH > 9.
Q Qualitative result due to sampling technique.
X Location is undefined.
J Estimated value.
R Unusable result.

QA QUALIFIER:
Validated according to quality assurance guidelines.

SAMPLE ID CODES: 000X = Filtered sample (0.45 µm). N00X = Unfiltered sample. X = replicate number.

LAB QUALIFIERS:
* Replicate analysis not within control limits.
> Result above upper detection limit.
B Inorganic: Result is between the IDL and CRDL. Organic: Analyte also found in method blank.
D Analyte determined in diluted sample.
E Inorganic: Estimate value because of interference, see case narrative. Organic: Analyte exceeded calibration range of the GC-MS.
H Holding time expired, value suspect.
IIncreased detection limit due to required dilution.
J Estimated.
N Inorganic or radiochemical: Spike sample recovery not within control limits. Organic: Tentatively identified compound (TIC).
P > 25% difference in detected pesticide or Aroclor concentrations between 2 columns.
U Analytical result below detection limit.
W Post-digestion spike outside control limits while sample absorbance < 50% of analytical spike absorbance.
X,Y,Z Laboratory defined qualifier, see case narrative.

DATA QUALIFIERS:
F Low flow sampling method used.
L Less than 3 bore volumes purged prior to sampling.
U Parameter analyzed for but was not detected.
G Possible grout contamination, pH > 9.
Q Qualitative result due to sampling technique.
X Location is undefined.
J Estimated value.
R Unusable result.

QA QUALIFIER:
Validated according to quality assurance guidelines.

Stoller Newport News Nuclear

April 24, 2015

Task Assignment 104
Control Number 15-0501

U.S. Department of Energy
Office of Legacy Management
ATTN: Art Kleinrath
Site Manager
2597 Legacy Way
Grand Junction, CO 81503

SUBJECT: Contract No. DE-LM0000415, Stoller Newport News Nuclear, Inc. (SN3), a wholly owned subsidiary of Huntington Ingalls Industries, Inc.
Task Assignment 104 LTS&M - Nevada Offsites and Monticello
May 2015 Environmental Sampling at the Rulison, Colorado, Site

REFERENCE: Task Assignment 104, 3-104-1-07-619, Rulison, Colorado, Site

Dear Mr. Kleinrath:

The purpose of this letter is to inform you of the upcoming sampling event at the Rulison site. Enclosed are the map and tables specifying sample locations and analytes for monitoring at the site. Water quality data will be collected at this site as part of the routine environmental sampling currently scheduled to begin the week of May 25, 2015.

The following lists show the locations scheduled for sampling during this event.

MONITORING WELLS

Off-Site

CER Test Well	Daniel Gardener	Kevin Whelan	Morrissania Ranch
Patrick McCarty	Tim Jacobs Ranch New		

On-Site

Cary Weldon House W — Wesley Kent House W

Municipal Water Supply

City Springs

SURFACE WATER

On-Site

Spr 300 Yrd N of GZ — Sprg 500ft E of GZ

Off-Site

Battlement Creek — Potter Ranch

All samples will be collected as directed in the *Sampling and Analysis Plan for U.S. Department of Energy Office of Legacy Management Sites*. Notification for access to locations on private property will be conducted prior to the beginning of fieldwork.

If you have any questions, please call me at (970) 248-6477 or Rick Findlay at (970) 248-6419.

Sincerely,

Richard D. Hutton
Site Lead

Trip Report

This page intentionally left blank

Stoller Newport News Nuclear

Memorandum

DATE: June 8, 2015

TO: Rick Hutton

FROM: Jennifer Graham

SUBJECT: Trip Report (LTHMP Sampling)

Site: Rulison, CO

Dates of Sampling Event: May 20 - 22 and 27, 2015

Team Members: Lauren Goodknight, Jeff Price, and Jennifer Graham

Number of Locations Sampled: Samples were collected from 13 of the 13 locations identified on the sampling notification letter, dated April 24, 2015, as follows:

	Locations That Were Sampled	Planned Locations
Monitoring wells	8	8
Surface water locations	4	4
Municipal water supply	1	1

All samples will be analyzed for tritium and gamma spec; a select set of samples will also be analyzed for enriched tritium (Morrissania Ranch, Patrick McCarty, Wesley Kent House W).

Locations Not Sampled/Reason: All scheduled locations were sampled.

Location Specific Information:

Location IDs	Comments
Sprg 500ft E of GZ, CER Test Well, Battlement Creek	Turbidity not met. Samples were filtered
Wesley Kent House	Water sampled is from a surface water source.

Quality Control Sample Cross Reference: The following is the false identification assigned to the quality control sample:

False ID	Ticket Number	True ID	Sample Type	Associated Matrix
2487	NGQ 002	Cary Weldon House W	Duplicate	Groundwater

Requisition Index Number (RIN) Assigned: Samples were assigned to RIN 15057039. Field data sheets can be found in \\crow\RAApps\SMS\15057039\FieldData

Sample Shipment: The samples were shipped overnight FedEx from Grand Junction, Colorado, to GEL Laboratories in Charleston, SC., on May 27, 2015.

Locations Not Sampled/Reason: None.

Water Level Measurements: Water levels were measured in all sampled wells. The water level measurements were recorded in FDCS and uploaded to SEEPro database.

Well Inspection Summary: All wells sampled were in good condition.

Sampling Method:

- Samples were collected according to the *Sampling and Analysis Plan (SAP) for the U. S. Department of Energy Office of Legacy Management Sites* (LMS/PRO/S04351, continually updated).

Field Variance: None.

Equipment: All equipment functioned properly.

Stakeholder/Regulatory: SN3 site lead Rick Hutton observed sampling operations on May 21, 2015.

Institutional Controls:

Fences, Gates, Locks: None.
Signs: None.
Trespassing/Site Disturbances: N/A

Site Issues:

Disposal Cell/Drainage Structure Integrity: N/A
Vegetation/Noxious Weed Concerns: N/A
Maintenance Requirements: None.
Access Issues: None.
Safety Issues: None.

Corrective Action Required/Taken: None
